

OUR HISTORY

Epigen may be 50 years old in 2020 but its history goes much further back. 2020 represented the 73rd anniversary of the Group's formation.

Founded in 1947 by Mssrs King & Jones, Peerless was hailed as being at the forefront of wax emulsion technology, leading the way through commercial and industrial applications. Extending later into detergent chemistry, Peerless continued to lead technology advances into the hygiene & janitorial sectors.

Ongoing growth of the Peerless Group saw the introduction of the Industrial Systems Company in 1970, specialising in epoxy resin technology through its tradename product Epigen. Through the 1990's, a new range was released, focused on smaller convenience packs, this being the Prolong Range. Peerless Industrial Systems markets extend globally into Europe, Asia, and South America.

With a local Peerless office in Singapore since 2004, and manufacturing in other countries, Mssrs King & Jones would be very proud to see the foundation they set being built on so strongly and the organisation so active in working alongside, and as a part of so many diverse cultures.

The products continue to provide trusted performance for a variety of applications in the mining, water, construction, and general industrial fields. Time and continuity, a wonderful foundation - standing the test of time.

Epigen Epoxy Resins...

handling today's needs with tomorrow's technology...

Adhesives, Glues & Bonding

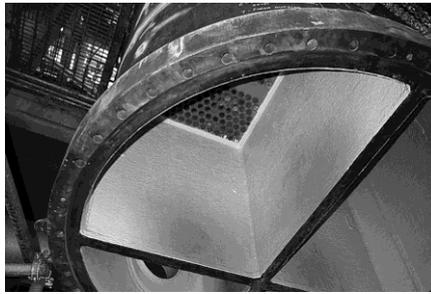

- designed for, or known to be suitable in bonding metals, plastics, timber, and a variety of other materials.

Abrasion Resistant, Ceramic & Metal Repair

- suitable for application to metal surfaces to reinstate or provide protection from abrasion and erosion.

Flooring

- all products demonstrating suitability for use in coating, lining, or repair of concrete, steel, or timber floors

Tank Linings & Continuous Immersion Service

- those products capable of lining equipment used in storage or conveying slurries, liquids and gases

Grouts & Load Bearing

- materials designed to support heavy equipment under static or dynamic load, and retain dimensional stability

Protective Coating & Atmospheric Exposure

- products suitable for coating equipment or structures from vapour and airborne degradation

Acid Protection & Secondary Containment

- designed for any service that possesses significant potential of degradation from very corrosive chemicals

High Temperature Service

- suitable for continuous service at temperatures beyond 80 Celsius

Binders, Patching & Repair Materials

- miscellaneous products for general service including joint sealant, flexible primers, and reinforced repair paste

TDS & SDS

Technical Reference Information and Material Safety Data for the EPIGEN & PROLONG products may be found on the website, www.peerlessindustrialsystems.com. This has links to all product groups and guides. Product Catalogues are available on request.
